PARTNER CAPABILITY BRIEF

Southern University Federal Contracting Capabilities

Engineering services Applied research Technical workforce Program delivery

A proven federal partner

Southern University and A&M College offers federal agencies and prime contractors an established platform for engineering, applied research, technical services, and workforce development. The University reports more than 26 years of federal contracting experience, more than 25 million dollars in federal contract awards, and performance as both a prime contractor and subcontractor. Its record includes three U.S. Army Corps of Engineers indefinite delivery indefinite quantity prime contracts and collaboration with Boeing in support of NASA's Space Launch System program.

26 plus years	25 million plus	Three	Two fiscal years
Federal contracting	Reported federal awards	USACE IDIQ prime contracts	NASA recognition with Boeing

Why Partners Engage Southern

Strength	Partner value
Federal delivery history	Experience working within federal acquisition environments as a prime and subcontractor, including engineering and professional-services IDIQ vehicles.
USACE experience	Work associated with the New Orleans, St Louis, Rock Island, Kansas City, Huntsville, and Vicksburg Districts, including planning, ecological, geotechnical, environmental, and project-management services.
Boeing and NASA performance	A NASA Mentor Protégé relationship tied to the Space Launch System that completed documented milestones, trained students, and earned NASA recognition.
Multidisciplinary institution	Engineering, science, technology, business, agriculture, law, and workforce programs supported by an HBCU system and Carnegie R2 research institution.
Louisiana presence	Local knowledge, institutional infrastructure, and access to students, graduates, faculty, laboratories, and technical specialists in a region central to Gulf Coast and Mississippi Valley missions.

Partnership objective Southern seeks defined, performance-based roles that align technical scope, qualified personnel, facilities, and measurable contract workshare with the needs of the prime contractor and federal customer.

Boeing and NASA Partnership

Southern's work with Boeing under NASA's Mentor Protégé Program demonstrates how the University can integrate with a major federal prime contractor while strengthening technical capacity and developing an engineering workforce.

Space Launch System Support

NASA's Marshall Space Flight Center hosted the December 2020 signing of an 18-month Mentor Protégé Agreement between Boeing and Southern University. The agreement supported Boeing's work as NASA's prime contractor for the Space Launch System core stage and flight avionics. NASA identified Southern as the first federally designated HBCU with which Boeing entered a Mentor Protégé Agreement. The relationship also created an engineering-talent pipeline for NASA and Boeing production sites, including the Michoud Assembly Facility in Louisiana.

Demonstrated Results

Evidence	What it demonstrates
Eleven milestone tasks completed in support of the Space Launch System program	Ability to organize a structured development effort around specific deliverables and customer objectives.
Guidance and training provided to students	Capacity to connect contract performance with practical workforce preparation and early-career talent development.
Five engineering graduates supplied to work as Boeing engineers according to Southern's past-performance record	A practical pathway from university preparation to technical work supporting a major aerospace program.
NASA Marshall fiscal year 2021 Small Business Mentor Protégé of the Year	External recognition of the Boeing and Southern team's participation under the Space Launch System Stages Contract.
Fiscal year 2022 Mentor Protégé Agreement of the Year	NASA recognition of the team's completion of milestone tasks and student development work.

Value for Future Prime Contractors

- A university partner with experience working within the governance, reporting, and performance expectations of a major federal prime.
- Access to engineering graduates and supervised technical talent that can support recruiting, workforce development, and surge needs.
- An institutional platform for applied research, laboratories, technical analysis, education, and capability development.
- A credible HBCU partner for teams seeking substantive participation supported by workshare, deliverables, and accountable leadership.

NASA source record NASA publications document the agreement, Space Launch System connection, 11 completed milestones, student training, and fiscal year 2021 and 2022 recognition.

Army Corps of Engineers Experience

Southern's federal portfolio includes work with multiple U.S. Army Corps of Engineers districts. The record combines prime-contract experience with subcontractor participation and covers planning, environmental, ecological, geotechnical, materials, hydrology, surveying, and project-management services.

District and contract	Selected scope	Role and value
New Orleans District DACW 29 03 R 0035	Preliminary planning and investigation for the Flat Lake Water Management Unit	Reported project value 1.5 million dollars
New Orleans District W912P8 06 R 0196	Planning investigations, studies, and project-management services in South and South Central Louisiana	Reported project value 4.5 million dollars
St Louis District W912P9 07 R 0728	Professional-services IDIQ for ecological and biological services	Reported IDIQ value 3.5 million dollars
Rock Island District W912EK 14 R 0001	Geotechnical exploration and testing, geotechnical engineering, concrete and asphalt testing, environmental investigations, and environmental engineering	Subcontractor to Terracon Reported award value 2.5 million dollars
Kansas City District W912EK 14 R 0001	Geotechnical exploration and testing, geotechnical engineering, concrete and asphalt testing, environmental investigations, and environmental engineering	Subcontractor to Terracon Reported award value 1.5 million dollars

Additional District Reach

Southern's past-performance record also identifies work involving the Huntsville and Vicksburg Districts. Project-specific scope, dates, contract roles, values, and references should be confirmed for each opportunity before proposal submission.

Related Federal Project Experience

- Biological and ecological services, coastal studies, environmental assessments and impact statements, and remedial-site support.
- Hydrology, land surveying, GIS and remote sensing, field investigations, soil mechanics, and geotechnical services.
- Planning studies, campaign-plan implementation, project management, technical documentation, and multidisciplinary coordination.
- Reliability engineering, failure analysis, simulation and modeling, additive manufacturing, robotics, high-performance computing, cybersecurity, artificial intelligence, and information systems.

Contracting Recognition

Southern reports three Department of Defense Nunn-Perry Awards recognizing mentor-protégé teamwork and excellence in federal contracting and project management. Together with its NASA recognition, these awards support Southern's position as an institution able to contribute to structured capacity-building relationships while delivering technical value.

Prime and Subcontractor Strengths

Southern can participate as a prime contractor, subcontractor, teaming partner, or institutional contributor when the role matches the procurement and the University's verified resources. The best partnerships assign specific work, named leaders, measurable deliverables, and an anticipated percentage of contract effort.

As a prime contractor	As a subcontractor or teaming partner
Lead defined technical and professional-services scopes supported by institutional expertise.	Integrate specialized technical work into the prime's program structure and quality system.
Coordinate multidisciplinary university resources and external specialists.	Fill capability gaps in engineering, environmental, geotechnical, GIS, research, or workforce functions.
Manage federal reporting, technical documentation, schedules, and partner performance.	Provide Louisiana and Gulf Coast knowledge, local access, facilities, and talent pipelines.
Build task-specific teams through academic, research, technical, and industry relationships.	Support meaningful HBCU participation through defined workshare rather than nominal affiliation.

Core Capabilities

Engineering and field services	Digital and research services	Program and workforce services
Civil and environmental engineering Geotechnical and materials services Hydrology and coastal studies Surveying and field data support	GIS and remote sensing Simulation and modeling High-performance computing Cybersecurity and artificial intelligence	Program and project management Technical writing and documentation Workforce development Graduate and faculty engagement

Institutional Profile

Southern University and A&M College is an HBCU, Land-Grant institution, and Carnegie R2 research institution. It is part of the Southern University System, which includes campuses and units supporting engineering, science, technology, mathematics, agriculture, law, aviation, research, extension, and professional education.
